

**PERRAN
TRUSSES**

Cut rafters

Fully Cut Roofs and Pre Cut Infill

Where a Cut Roof is drawn by an architect, you no longer need allow weeks for the roof to be cut on site.

With our state of the art machinery we can pre-cut all the timbers required for the roof structure.

The computerised machinery has a tolerance of 1mm, unlike someone cutting the timbers by hand, no matter how skilled.

Making the installation of the roof a fast and safe process. **INCREASING** efficiency and **REDUCING** labour costs.

All you need is the appropriate scaffold, and a hammer and nails!

Modern construction is all about site safety, construction speed and cost. Perran Trusses can help.

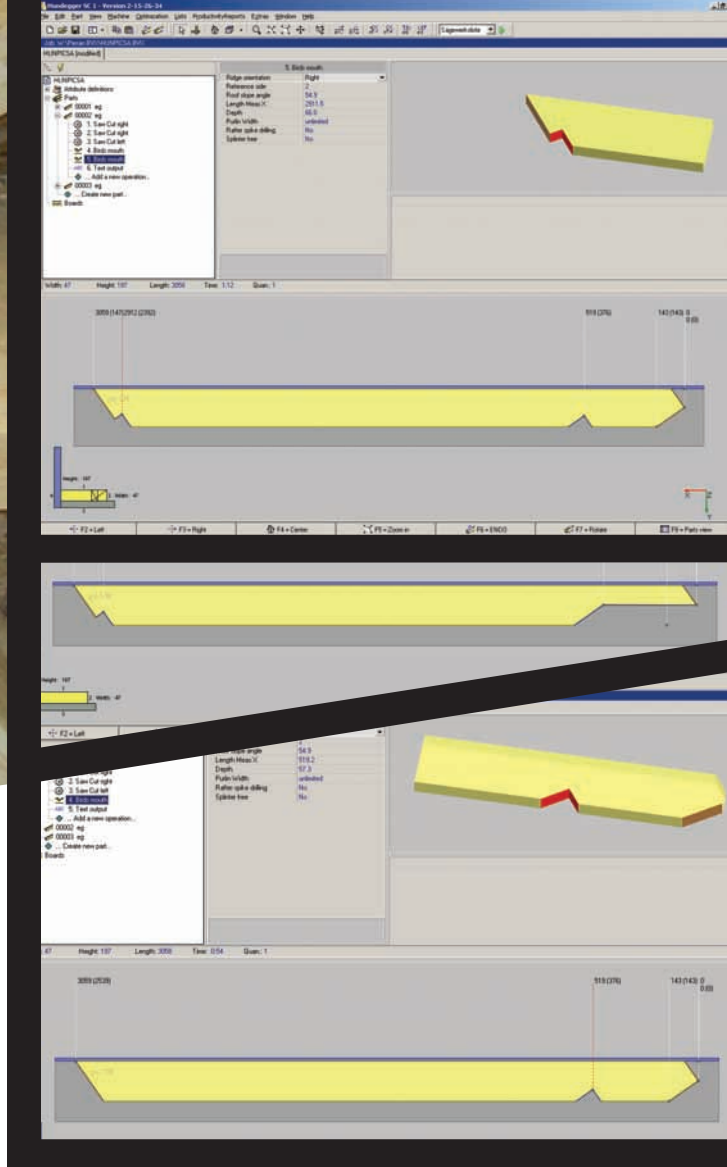

**Hundegger
SC3**

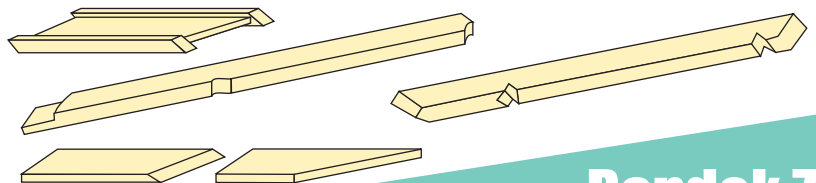

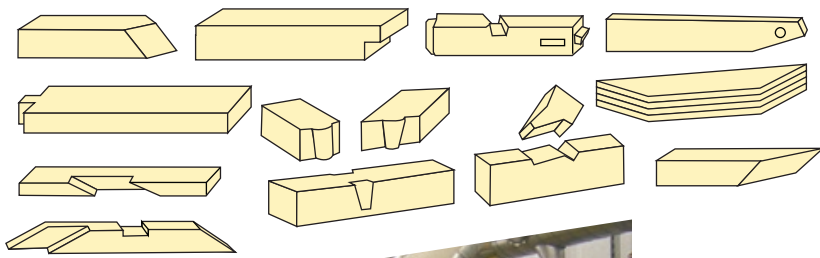

Quality Hundegger machinery is installed in the factory - an SC1 Speed cut saw and the new SC3 which features amongst other innovations a flangeless saw blade that can rotate 360°, bevel from 0° to 90°, and is capable of accurately cutting to tolerances of less than 1mm.

WE cut

- so YOU don't have to

Example cuts

Randek 710

For use with feature timbers of sizes up to 700 x 450 x 16 metres, the Randek 710 (shown left) is an automated saw providing automated vertical and horizontal milling, drilling and automated mortising.

Perran Trusses

are specialist manufacturers of standard roof trusses, fully cut roofs, posi-joists, FrameWeb joists, feature trusses and cassette floors. Fully computerised design and production, including precut loose timber (angles / bevels / birds mouth cuts / castellations, etc).
